Spoon Transfer: Step by Step

Practical life · Ages 2–3

Spooning is a 'preliminary exercise' in Montessori: it prepares the hand for eating, pouring and later writing, and it builds deep concentration.

You'll need

- ○ A small tray
- ○ Two small bowls (steel katoris work well)
- ○ A small spoon
- ○ Chana or rajma to start; moong or rice later

Presenting it

- ○ Carry the tray to the table with two hands.
- ○ Sit to your child's right.
- ○ Slowly scoop from the left bowl, pause, tip into the right bowl.
- ○ Repeat until empty, then swap the bowls and offer a turn.

Make it harder over time

- ○ Smaller grains
- ○ A smaller or deeper spoon
- ○ A third bowl or an ice-cube tray
- ○ Scooping water with a ladle

Safety

Always supervise, and use large beans for children who still put things in their mouths.
