Plant Care for Little Hands

Care of the environment · Ages 2–4

Caring for a living thing is one of the most meaningful jobs a young child can have. Start with one hardy plant and one fast sprouting pot.

You'll need

- ○ A small watering can (or a small jug)
- ○ A small damp cloth
- ○ One hardy plant: money plant, tulsi, snake plant
- ○ A small pot, soil and methi or mustard seeds

Daily routine

- ○ Touch the soil. Dry? Water a little. Wet? Not today.
- ○ Wipe one or two big leaves gently.
- ○ Pick up any fallen leaves.

Grow methi in 5 days

- ○ Day 1: Soak seeds overnight.
- ○ Day 2: Sprinkle on moist soil, cover lightly.
- ○ Day 3–5: Keep moist. Watch for sprouts!
- ○ Week 2: Snip and add to your dal or paratha together.

Talk about it

- ○ “What does the plant need?” (water, sun, soil)
- ○ “Is the soil dry or wet?”
- ○ “How tall is it today?” Measure with a stick each week.

Safety

Choose plants that are safe if touched or nibbled, and keep pots small enough not to tip on little feet.
